

ABIN GEORGE

AI & Backend Developer — Computer Engineering Student

Kasaragod, Kerala, India

+91 854 721 6321 — abin.george.work@gmail.com

Portfolio: <https://abin-george-portfolio.vercel.app>

GitHub: <https://github.com/ab1ngeorge> — LinkedIn: [linkedin.com/in/abingeorge](https://www.linkedin.com/in/abingeorge)

PROFESSIONAL SUMMARY

Results-driven Computer Engineering student specializing in backend development and AI-powered applications. Developed 5+ intelligent systems using Python, NLP, and Flutter with 85%+ accuracy in voice recognition. Won 3 hackathons including 1st place at CIPHERTHON 2.0 and MediHack. Proven ability to deliver scalable solutions and optimize system performance by 40%. Experienced in cross-platform mobile development, machine learning model deployment, and REST API integration.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, Dart, C++, Java, C

Frameworks & Libraries: Django, Flutter, Flask, TensorFlow, scikit-learn, REST APIs

AI/ML Technologies: Natural Language Processing, Speech Recognition, Intent Classification, Machine Learning, Deep Learning, Supervised Learning

Databases: MySQL, MongoDB, SQLite, PostgreSQL

Developer Tools: Git, GitHub, Docker, VS Code, Android Studio, IBM Watson Studio, Figma

Core Competencies: Object-Oriented Programming, Database Management Systems, Data Structures, Algorithms, Agile Methodology, API Development, UI/UX Design

PROFESSIONAL EXPERIENCE

Artificial Intelligence & Python Development Intern

July 2024

PACELAB & E-Cell, IIT Bombay (Remote)

- Developed machine learning models for 5+ real-world applications, achieving 88% prediction accuracy
- Executed NLP-based tasks including sentiment analysis and text classification with 90%+ F1 scores
- Performed data preprocessing and feature engineering on datasets with 10,000+ records
- Implemented model optimization techniques, reducing training time by 30%

Flutter Developer Intern

June 2022

Soften Technologies, Kochi, Kerala

- Engineered 3+ cross-platform mobile applications using Flutter and Dart, improving UI responsiveness by 40%
- Integrated RESTful APIs for real-time data synchronization, reducing data latency by 35%
- Optimized application performance across Android and iOS platforms, achieving 4.5+ star ratings
- Collaborated with design team to implement user-centric features, increasing user engagement by 25%

KEY PROJECTS

CampusFlow-AI — Flutter, AI Integration, Firebase

- Architected AI-enabled campus assistance mobile application serving 500+ students with intelligent query handling
- Designed intuitive user flows reducing average query resolution time by 60%
- Implemented real-time notification system with 95% delivery success rate

- Developed responsive UI components ensuring seamless performance across 15+ device types

Malayalam Voice Assistant — Python, NLP, Speech Recognition, TensorFlow

- Built bilingual voice assistant supporting Malayalam and English with 85%+ speech recognition accuracy
- Implemented intent classification system processing 50+ query types with 90% accuracy
- Designed structured FAQ database containing 200+ responses for context-aware interactions
- Reduced average response time to under 2 seconds through optimized NLP pipeline

Virtual Assistant System — Python, Machine Learning, NLP, scikit-learn

- Developed intent classification model using supervised learning with 92% accuracy on test data
- Designed conversational flows handling multi-turn dialogues with context retention
- Integrated speech-to-text functionality supporting 3+ languages
- Achieved 95% user satisfaction rate through iterative testing and optimization

Diabetes Prediction Model — Python, IBM Watson Studio, Machine Learning

- Constructed predictive model using Extra Trees Classifier achieving 89% accuracy for early diabetes detection
- Performed hyperparameter tuning and feature selection on 8 clinical parameters
- Deployed scalable solution on IBM Cloud platform supporting 1000+ concurrent users
- Reduced prediction time by 45% through model optimization techniques

MediBridge Healthcare Application — Flutter, Firebase, REST APIs

- Created healthcare application improving medical service accessibility for 300+ users
- Implemented appointment scheduling system reducing booking time by 70%
- Designed user-centric interface with 95% task completion rate
- Integrated secure data storage complying with healthcare data privacy standards

EDUCATION

Bachelor of Technology in Computer Engineering

2023 – 2026

LBS College of Engineering, Kasaragod, Kerala

Relevant Coursework: Data Structures, Algorithms, Database Management, Machine Learning, Artificial Intelligence

Diploma in Computer Engineering

2020 – 2023

Government Polytechnic College, Mananthavady, Kerala

Grade: First Class with Distinction

ACHIEVEMENTS & RECOGNITION

- **1st Place Winner** – CIPHERTHON 2.0, 6-hour Inter-College Hackathon among 50+ teams (CIPHER 2026)
- **1st Place Winner** – MediHack Hackathon, Teranis'24, IEEE Computer Society SBC LBSCEK
- **3rd Place Winner** – TeraForge 24-hour Hackathon among 40+ teams (Teranis 2K26)
- Conducted AI workshop for 100+ students with hands-on demonstrations on machine learning applications

CERTIFICATIONS

- Cloud Computing – NPTEL (2024) — Certificate ID: NPTEL24CS123
- AI Agent Architect – IBM SkillsBuild (2024)

- Artificial Intelligence, Data Science & Natural Language Processing – Infosys Springboard (2024)
- Python Programming & Web Application Security – DevTown (2023)
- Git & GitHub Professional Bootcamp – LetsUpgrade (2023)
- Project Management Foundations – LinkedIn Learning (2024)

ADDITIONAL INFORMATION

Languages: English (Fluent), Malayalam (Native), Hindi (Conversational)

Leadership: Technical Workshop Facilitator, College Basketball Team Member

Interests: AI Applications, Backend Architecture, Voice Technology, Open Source Contribution
